

Ruby - Feature #10326

[PATCH] optimize: recv << "literal string"

10/05/2014 09:29 AM - normalperson (Eric Wong)

<div>Status:Rejected</div> <div>Priority:Normal</div> <div>Assignee:</div> <div>Target version:2.2.0</div>	
<div>Description</div> <div>Concatenating literal strings to existing strings seems fairly common practice, so avoid extra garbage when doing it. I don't know if escape analysis is coming to Ruby, but this seems easier-to-do for now:</div> <div>vm2_strcat</div> <div>i = 0</div> <div>str = ""</div> <div>while i&lt;6_000_000 # benchmark loop 2</div> <div>  i += 1</div> <div>  str &lt;&lt; "const"</div> <div>  str.clear</div> <div>end</div> <div>trunk 1.020890216</div> <div>trunk 1.018797116</div> <div>trunk 0.992393447</div> <div>built 0.626914306</div> <div>built 0.627910138</div> <div>built 0.644469095</div> <div>benchmark results:</div> <div>minimum results in each 3 measurements.</div> <div>Execution time (sec)</div> <div>name  trunk  built</div> <div>-----+-----+-----</div> <div>loop_whileloop2  0.160  0.159</div> <div>vm2_strcat*  0.833  0.468</div> <div>Speedup ratio: compare with the result of `trunk` (greater is better)</div> <div>name  built</div> <div>-----+-----</div> <div>loop_whileloop2  1.006</div> <div>vm2_strcat*  1.779</div> <div>Future optimizations:</div> <div><ul style="list-style-type: none"><li>• recv &lt;&lt; "interpolated #{dstr}" (immediate free + force recycle)</li><li>• elide allocation for equality comparisons: str == "literal" and "literal" == str</li><li>• optimize &lt;&lt; recv is IO &lt;&lt; (str dstr) (maybe)</li></ul></div>

History

---

#1 - 10/06/2014 02:32 AM - normalperson (Eric Wong)

- Related to Feature #10329: [PATCH 2/1] optimize: foo == "literal string" added

#2 - 10/07/2014 01:21 AM - normalperson (Eric Wong)

[normalperson@yhbt.net](mailto:normalperson@yhbt.net) wrote:

Future optimizations:

- `recv << "interpolated #{dstr}"`  
(immediate free + force recycle)

Tried, not worth it from what I can tell:  
<http://80x24.org/spew/m/7c7dd29f45920fb8fc9d2c72858334c60e0a9c58.txt>  
(however, a good learning experience for me)

- elide allocation for equality comparisons:  
`str == "literal"` and `"literal" == str`

See [Feature #10329] and [Feature #10333]

- `optimize << recv` is `IO << (str|dstr)` (maybe)

I doubt it's worth the effort because of syscall overhead. This (#10326) is fairly minor compared to the "==" optimizations in #10329 and #10333

#3 - 10/07/2014 03:55 AM - nobu (Nobuyoshi Nakada)

- Description updated

#4 - 10/24/2014 03:27 AM - normalperson (Eric Wong)

- Status changed from Open to Rejected

obsoleted by Feature #10423
