Description

When compiling ruby on cygwin, I get the following warnings for proc.c:

```
compiling proc.c
proc.c: In function 'call_method_data_safe':
proc.c:1984:11: warning: variable 'result' might be clobbered by 'longjmp' or 'vfork' [-Wclobbered]

I don't see that warning, with optflags=-O0 .. -O3.

And here are the settings used in my case:

```
/cygdrive/i/szsz/tmp/gcc/gcc-5.3.0-3.x86_64/src/gcc-5.3.0/configure

Seems older a little.

#4 - 05/16/2016 11:14 AM - duerst (Martin Dürst)

I updated to

```
/cygdrive/i/szsz/tmp/gcc/gcc-5.3.0-5.x86_64/src/gcc-5.3.0/configure
```

but the error persists.

#5 - 05/16/2016 01:27 PM - rhenium (Kazuki Yamaguchi)

I'm also seeing the warning on my Linux box with GCC 6.1.1/5.3.0. Removing "-Wsuggest-attribute=noreturn" from configure.in fixes for me. There is a difference in configure output.

With -Wsuggest-attribute=noreturn:

```
checking for __builtin_setjmp... no
checking for setjmp type... __setjmp
```

Without -Wsuggest-attribute=noreturn:

```
checking for __builtin_setjmp... yes with cast ()
checking for setjmp type... __builtin_setjmp
```

The problem is in the check program. -Wsuggest-attribute=noreturn suggests adding noreturn to t(), but this is compiled with -Werror and check fails.

```
#include <setjmp.h>
#include <stdio.h>

jmp_buf jb;
void t(void) {__builtin_longjmp((void **) jb, 1);}
int jump(void) {(void) (__builtin_setjmp((void **) jb) ? 1 : 0); return 0;}

int main(void)
{
    void (*volatile f)(void) = t;
    if (!jump()) printf("%d\n", f != 0);
    return 0;
}
```
