

## Ruby - Bug #14117

### [Compile] config.sub missing in 2.5.0-preview1 pulled from GitHub

11/19/2017 11:30 PM - leam (Leam Hall)

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Target version:</b>		
<b>ruby -v:</b>	2.5.0-preview1	<b>Backport:</b> 2.3: UNKNOWN, 2.4: UNKNOWN
<b>Description</b> Updated autoconf to GNU latest (2.69). In "ruby" ran "autoconf". When running ./configure I get: configure: error: cannot run /bin/sh tool/config.sub  Checking tools/, there is no "config.sub". Copying in the config.sub from 2.4.2 source seems to work so far.		

#### History

##### #1 - 11/19/2017 11:40 PM - leam (Leam Hall)

- Subject changed from [Compile] config.sub missing in 2.5.0-preview1 to [Compile] config.sub missing in 2.5.0-preview1 pulled from GitHub

This issue occurs if you clone the github repo. It does not happen if you download the tar.gz file.

When running ./configure I get:  
configure: error: cannot run /bin/sh tool/config.sub

Checking tools/, there is no "config.sub".  
Copying in the config.sub from 2.4.2 source seems to work so far.

##### #2 - 11/20/2017 01:36 AM - MSP-Greg (Greg L)

When using the repo, you need:

```
make update-config_files
```

If you have any more build questions, the .travis.yml file and the travis logs may be helpful (and also with gems, etc).

##### #3 - 11/20/2017 10:37 AM - leam (Leam Hall)

Greg, that works!

Of course, make update-config\_files looks for an existing Ruby as well, which seems a different issue. Not sure how it would do a totally clean build.

Now I just have to figure out how to close the issue....
