

## DATA PRODUCTION

**Direct**, thanks to a collaborative data monitoring network

**Participative**, with suggestions from users

**Assisted**, via data verification tools and comparisons with external sources

**Declarative**, through the Publishing Policies Declaration Service

## AUTOMATED IMPORT

Of **metadata** from partner databases such as DOAJ, ISSN, IdRef, Sherpa Romeo, Sudoc

Of **online access** information from journal platforms (Kbart imports)

Of **external links**: EZB, DOAJ, HAL, MIAR, OpenAlex, ROAD, Scopus, WOS, Wikipedia, Worldcat, etc.

## METADATA ALIGNMENT

Checking the consistency and quality of data in the context of projects and partnerships

**DOAJ**

**Sherpa Romeo**

**Sudoc and IdRef**

**Wikidata**

Descriptive data on:

- the titles
- their indexing
- editorial structures
- journal platforms
- online content

## DISSEMINATION ON MIR@BEL

All the data collected can be consulted on Mir@bel **public website**

A large range of **customisation tools for partners**:

- **institutional access** for identified users
- **links to the catalogue entries** of institutional libraries and display of **collection status** via Sudoc information
- **display of subscriptions** and personalised view of **online access to journals**
- generation of journal lists or collections using our “**grappes**” (clusters) feature

## DATA REUSE

**Display in library catalogues** via enrichment services (C3RB, Koha, PMB and Syracuse)

**Exports** of search results (CSV) or on demand (regular exports for IdRef and Sudoc)

Locating **full-text free access** in the Sudoc catalogue

Feeding of the **Sherpa Romeo** database

Production of Kbart files to feed the **Bacon database** and **discovery tools** (Open Access, Episciences, Repères)

**Data exposure in an API** allowing multiple uses (catalogue of journals from incubators federated by the Repères network, etc.)
