Differences between versions

Character encoding

0. Unicode

Formex version 4 is based on Unicode 6.0. The encoding follows the specifications of UTF-8. It covers the official languages of the European Union as well as languages used in the European Economic Area and of some candidate Member States. The latter are included just for technical reasons and do not have any political value.

The following chapters give an overview about the different characters which are used in a specific context or for a given language. If for particular purposes other characters have to be integrated in a document the corresponding Unicode character has to be used.

Character entities may only be used under these circumstances:

- (1) numeric values corresponding to the Unicode code such as ' ' for 'no-break-space';
- (2) special characters having a specific function within an XML instance: '<', '>', '"', '&' and '''.

All other character entities are forbidden. As Formex 4 is based on XML Schema, there is no possibility to define an entity; any character entity other than those mentioned above, will lead to a parsing error.

The creation of text entities is only possible in the context of fragment handling.

Information on the use of special characters can be found in the "Interinstitutional style guide" [<http://publications.europa.eu/code/en/en-000300.htm>].

Character ranges

0020-007E, 00A0-00A3, 00A5-00A7, 00A9, 00AB-00AC, 00AE, 00B0-00B1, 00B5, 00B7, 00BB-00FF, 0100-0107, 010A-0113, 0116-011B, 011E-0123, 0126-0127, 012A-012B, 012E-0133, 0136-0137, 0139-0148, 014A-014D, 0150-015B, 015E-0165, 016A-016B, 016E-0173, 0178-017E, 0192, 01C4-01CC, 0218-021B, 0374, 037E, 0386-038A, 038C, 038E-03A1, 03A3-03CE, 0401-0405, 0407-042A, 042C, 042E-044A, 044C, 044E-044F, 0451-0455, 0457-045F, 0490-0491, 2010, 2013-2014, 2018-2022, 2026, 202F, 2030, 2032-2034, 2039-203A, 203E,

20AC, 2116, 2122, 2153-2154, 215B-215E, 2190-2199, 21D0-21D9, 21E6-21E9, 2213, 221A, 221E, 222B, 2243, 2245, 2248, 2260-2267, 2276-2277, 227C-227D, 22D5, 22DE-22DF, 2300, 2326, 2329-232B, 25A0-25A1, 25C7, 2605-2606, 2640, 2642, F106-F10A, F1B1, FB01-FB02.

Nota bene: The characters 00B5 and 00B7 are integrated because of legacy reasons, they should not be used for the creation of new instances.

Nota bene: The character 2026 (horizontal ellipsis) has also to be used as a place-holder for a dotted helpline. In this case, it should be used only once without regarding the number of dots effectively needed.

1. Quotation marks

"	Name	quotation mark
	Unicode	0022
	UTF-8	22
'	Name	apostrophe/quote (single quotation mark)
	Unicode	0027
	UTF-8	27
«	Name	left pointing guillemet (ISO: left-pointing double angle quotation mark)
	Unicode	00AB
	UTF-8	C2AB
»	Name	right pointing guillemet (ISO: right-pointing double angle quotation mark)
	Unicode	00BB
	UTF-8	C2BB
‘	Name	single turned comma quotation mark
	Unicode	2018
	UTF-8	E28098
,’	Name	single comma quotation mark
	Unicode	2019
	UTF-8	E28099
‚	Name	low single comma quotation mark
	Unicode	201A
	UTF-8	E2809A
’	Name	single reversed comma quotation mark
	Unicode	201B
	UTF-8	E2809B

“	Name	double turned comma quotation mark
	Unicode	201C
	UTF-8	E2809C
”	Name	double comma quotation mark
	Unicode	201D
	UTF-8	E2809D
„	Name	low double comma quotation mark
	Unicode	201E
	UTF-8	E2809E
”	Name	double reversed comma quotation mark
	Unicode	201F
	UTF-8	E2809F
<	Name	left pointing single guillemet (ISO: single left-pointing angle quotation mark)
	Unicode	2039
	UTF-8	E280B9
>	Name	right pointing single guillemet (ISO: single right-pointing angle quotation mark)
	Unicode	203A
	UTF-8	E280BA

2. Use of quotation marks in the different languages

Language	Level 1	Level 2	Level 3 ()
Bulgarian	„...“	„...“	„...“
Croatian	„...“	„...“	„...“
Czech	„...“	„...“	»...«
Danish	»...«	»...«	
Dutch	„...“	„...“	
English	\.../	“...”	
Estonian	„...“	„...“	„...“
Finnish ()	“...”	/.../	
French	«...»	“...”	\.../
German	„...“	„...“	
Greek	«...»	“...”	\.../
Hungarian	„...“	»...«	/.../
Icelandic	„...“ ()	„...“ ()	
Irish	“...”	\.../	“...”

Italian	«...»	"..."	\.../
Lithuanian	„...“	„...“	„...“
Latvian	“...”	“...”	“...”
Maltese	“...”	\.../	“...”
Polish	„...”	»...«	\.../
Portuguese	«...»	"..."	\.../
Romanian	„...”	«...»	„...”
Slovak	„...“	,...`	»...«
Slovenian	„...“	,...`	,...`
Spanish	«...»	"..."	\.../
Swedish	“...”	'...'	
Turkish	()	()	()

- () The third level is not always specified. In general, only two levels are supported, for all deeper levels the markup for the second level is re-used.
- () Not yet available.
- () Not yet confirmed.
- () It has to be taken into account that after the two expressions 'jäljempänä' and 'Tässä ... tarkoitetaan' the quotation marks of the second level have to be used instead of those for the first level.

3. Punctuation, parenthesis

	Name	period (ISO: full stop)
▪	Unicode	002E

Processing instructions

General use

In general, the use of processing instructions is forbidden. The only exceptions are those mentioned in this document. So if any provider uses processing instructions for technical or other reasons which do not comply with the specifications in this document, they have to be removed from the instances before transferring them to OPOCE.

All attributes which might be declared within processing instructions must have their values between double quotes.

The XML declaration

Although the XML declaration is not a processing instruction in the strict sense of the term, it has a similar format. Therefore we handle it in this chapter.

Each instance which is transferred to OPOCE has to start with the XML declaration. It specifies the version of the XML specification and the character encoding used for the document. These items are to be provided in form of so-called pseudo-attributes.

The declaration is case dependent. It always starts with the keyword "xml".

The current version of the XML specification is specified as an attribute named "version". The only value accepted is "1.0". If in the course of time W3C decides to adopt a new version of XML, it is up to the OPOCE to decide when and how this version will be used in the context of Formex.

The character encoding is specified by means of the attribute "encoding". The only value accepted is "utf-8". Any other value may only be used with written confirmation by OPOCE.

The XML declaration looks like this (attribute values must always be quoted using the double quote character ("")):

```
<?xml version="1.0" encoding="utf-8"?>
```

NB: Other attributes which are foreseen in the XML specification are not accepted.

Page breaks

The processing instruction PAGE is used to mark up the page breaks in an instance. Therefore, it may appear anywhere. The processing instruction has three attributes, "NO", "ID.VOL" and "PAGE.SIZE". The first one is mandatory for each occurrence of the processing instruction.

The first page break must be inserted at the bottom of the first page of a given document. The value given to the NO attribute is the number of the following page. The processing instruction must be repeated at the bottom of every page, with the exception of the last page.

In the case where a PAGE processing instruction has to be added at the end of a structural element, as far as possible it has to be placed outside all elements which logically belong to the same page.

If the processing instruction PAGE appears within a text block between two words, it has to be followed by a space. No spaces may be added, if it appears outside a text block. The objective of this rule is to get a valid document by simply deleting the processing instructions.

Attention: The previous rule is different from Formex v3.

When the page break falls within a divided word, the processing instruction must be placed after the word from which the caesura has been removed.

Page breaks in inclusions (INCL.ELEMENT) must also be marked up using the PAGE processing instruction. When a page break occurs at the end of the included document, the PAGE processing instruction will be inserted not in the included document, but just after the inclusion element in the calling document. The value of the NO attribute is the number of the page following the last page of the inclusion.

Specific processing is required for tables which cover a double page (format A3), for example tables relating to Taric. In these cases, the processing instruction is only used every two pages, i.e. at the bottom of right-hand pages. In addition, the attribute PAGE.SIZE has to be included with the value "A3", the value "A4" being the default.

For documents published over two or more volumes the ID.VOL attribute is used to indicate the identifier of the volume containing the page.

The processing instruction must not be used within a page which collects footnotes at the end of the document.

Column page break

The COL.PAGE processing instruction is used to mark up the page break in a column of a table when the contents of the cell cover two pages.

It is also present in other models which are similar to table or column structures.

The COL.PAGE processing instruction is used when the contents of the cell cover two pages. It is usually inserted after the tag indicating the end of the line.

The use of COL.PAGE does not under any circumstances replace the PAGE processing instruction.

CLG.MDFO

The CLG.MDFO processing instruction is used:

- to mark up the parts of the consolidated text which do not come from the basic act but from another document such as a modifying act or a corrigendum, and
- to save the source of these modifications.

This processing instruction is used to indicate the start of a modification. It is always accompanied by a CLG.MDFC processing instruction which indicates the end of the modification.

Various attributes describe the specialties of each modification:

The value of the attribute ID is the unique identifier of the occurrence of the modification in the record. The format of the value is of the type

OxxxxnnnMddddeeee

where:

- O: is a fixed value (Open);
- xxx: this value corresponds to the production sequence during which the modifications were introduced for the first time;
- nnn: this value corresponds to the version of the production sequence during which the modifications were introduced for the first time;
- M: is a fixed value;
- dddd: this value corresponds to the order of the modification in the phase (the record);
- eeee: this value is used to define a serial number when there are several occurrences of the same modification; for example, in the case of a global replacement. When there is only a single occurrence, the value is '0000'. When there are several occurrences, the value of the first occurrence is '0001'.

The values 'xxx' and 'nnn' can be deduced from the value assigned to the attribute PROD.SEQ of the element INFO.CONSLLEG for the production sequence during which the modifications were introduced for the first time.

The different values must always be represented by three digits. If necessary, the leading positions must be filled with zeros.

For each value assigned to the attribute ID, there must be one and only one occurrence of the processing instruction CLG.MDFC of which the attribute IDREF contains this value.

The value of the attribute IDREF refers to the occurrence of the CLG.MDFC processing instruction, which indicates the end of the modification in question.

For each value assigned to the attribute IDREF, there must be one and only one occurrence of the processing instruction CLG.MDFC of which the attribute ID contains this value.

The ACTION attribute is used to define the type of the modification. The following values are permitted:

- INSERTED: a straight forward insertion,
- DELETED: a straight forward deletion,
- REPEALED: the document is repealed,
- REPLACED: an insertion following a replacement,
- RENUMBERED: an insertion following a renumbering.

For a straight forward deletion, the deleted text must be saved. In this case the value "DELETED" is used. The old text and (where applicable) its structure are stored in the record. The beginning of the deleted text is marked up with the markup CLG.MDFO and the end of the deleted text is marked up with the markup CLG.MDFC.

In the case of the "REPLACED" and "RENUMBERED" values, however, the old text and (where applicable) its structure cannot be stored in the record.

The attribute LEVEL is used to define the nature of the modification.

The following values are permitted:

- STRUCTURE: a modification relating to a structural element,
- TEXT: a modification relating to a portion of text.

The distinction between the two values is not rigid. In some cases the context is indispensable for determining the value. These values are assigned during preparation.

The COMMAND attribute is used to define the way in which the modification has been described.

The following values are permitted:

- EXPLICIT: the modification is described explicitly in a modifying act or in a corrigendum (default value). Modifications described globally, such as global replacements, are also considered as explicit modifications.
- IMPLICIT: the modification is not described explicitly in a modifying act or in a corrigendum. Generally, these are modifications which are implied by an explicit modification; for example, grammatical modifications.
- GENERAL: the modification is described in general documents. Unlike documents containing implicit and explicit modifications, these documents do not necessarily appear on the list of modifying acts.

The ACTIVE.DOC attribute is used to specify the Celex reference of the active document. This is the document that describes the modification to be carried out.

The ACTIVE.LOC attribute is used to identify in more detail the location of the modification command within the active document.

The description of the location may consist of the following elements:

- specific abbreviations;
- numerical values representing the occurrence;
- the colon symbol: this symbol separates the abbreviation from the numerical value;
- the semicolon symbol: if the location consists of several abbreviations indicating several levels in the location, each abbreviation is separated by a semicolon;
- the symbol '.AND.': if there are several references to different locations, the references are separated by a logical connector in the form of '.AND.'.

Spaces are not allowed, except for those placed before and after a logical connector such as '.AND.'.

For abbreviations, the following codes may be used:

- AD: address
- AL: paragraph
- AP: appendix
- AX: annex
- AR: article
- CE: cell (of a table)
- CH: chapter
- CL: column

- CO: considering (preamble)
- DA: dash (EM-DASH)
- DC: declaration
- DI: disposition
- EL: element of list
- FA: final act
- FG: figure
- FI: final part
- FN: footnote
- LI: list
- LT: letter (in the context of an agreement in the form of an exchange of letters)
- PA: paragraph
- PB: preamble
- PC: protocol
- PP: physical paragraph
- PR: part
- PT: item
- RO: row (of a table)
- SC: subchapter
- SD: subdivision
- SE: section
- SN: phrase
- ST: subtitle
- SU: contents
- TA: table
- TI: title
- TT: title as subdivision
- TO: all of the act
- VI: approved

In some cases, additional information may be provided by the following abbreviations:

- (AB): at the beginning
- (AF): after
- (BE): before
- (EN): at the end
- (GL): global
- (IL): insertion in sorted list
- (NN): new numbering
- (ON): old numbering

In the context of paragraphs and articles, special abbreviations may be used:

- .A: 2nd
- .B: 3rd
- .C: 4th
- .D: 5th
- .E: 6th
- .F: 7th
- .G: 8th
- .H: 9th
- .I: 10th
- etc.

If there are more than 26 occurrences, the following abbreviations are used: .AA, .AB, .AC etc.

Some examples:

The value 'AR:1.A;PT:3;PT:c .AND. AX:1' refers to the locations 'Article 1A, item 3c' and 'Annex 1'.

If there is only one annex, the location is indicated as 'AX:0'.

The attribute MOD.LEVEL is used to identify the level of the modification. The default value is '1'. When there is a second-generation modification, which means a modification of the modifying act, the value assigned to MOD.LEVEL is '2', and so on.

Modifications of a higher level must always be imbedded in a lower-level modification. For example, a modification of level '2' must always be integrated into a modification of level '1'.

CLG.MDFC

This processing instruction CLG.MDFC is used to indicate the end of a modification. It is always accompanied by a CLG.MDFO processing instruction which indicates the start of the modification.

The value of the attribute ID is the unique identifier of the occurrence of the modification in the record.

The format of the value is of the type

CxxxnnnMdddeee

where:

- C: is a fixed value (Close);
- xxx: this value corresponds to the production sequence;
- nnn: this value corresponds to the version;
- M: is a fixed value;
- dddd: this value corresponds to the order of the modification in the phase;
- eeee: this value is used to define a serial number when the same modification is concerned.

The values 'xxx' and 'nnn' must correspond to the values assigned to the attribute PROD.SEQ of the element INFO.CONSLEG.

The different values must always be represented by three digits. If necessary, the leading positions must be filled with zeros.

For each value assigned to the attribute ID, there must be one and only one occurrence of the processing instruction CLG.MDFO of which the attribute IDREF contains this value.

The value of the attribute IDREF refers to the occurrence of the processing instruction CLG.MDFC, which indicates the end of the modification in question.

For each value assigned to the attribute IDREF, there must be one and only one occurrence of the processing instruction CLG.MDFO of which the attribute ID contains this value.

Composition of filenames

General rules related to OJ instances

Vocabulary

chapter	chapter within the context of secondary legislation publications
container	indicator for instance describing the composition of a document or a publication: no container: XML instance, document component doc: description of a document frag: encapsulation of fragments toc: table of contents of a volume (not a table of contents within a document!)
d	symbolic placeholder for digits
file.OJ	file within a OJ publication
file.ECR	file within European Court Reports
file.Schema	file containing a Formex schema version
file.PDF	file within a publication in PDF
file.CL	file containing a consolidated act
file.Sec.Leg	table of contents or specific file within a secondary legislation publication
language	language of the document or the publication
ojno	number of the <i>Official Journal</i>
page	starting page of the document; in some cases the number is preceded by a letter, which indicates that the numbering does not follow the normal pagination; the letter 'S' indicates supplement pages which are used for the cover pages of a publication of for inserted forms in the case of competitions, 'E' indicates any other inserted object, 'C' precedes the number of cover pages of a consolidated document; in any case the length of the pagination never exceeds 4 characters
sequence	sequence of document on the starting page
series	series of the <i>Official Journal</i>

subseries	indication of an <i>Official Journal</i> annexed to another one (A), only existing in an electronic format (E), being an isolated publication (I) or a special edition in Maltese (M)
tome	tome within a chapter of the secondary legislation
type	indication of the contents format: frg: The file contains fragments of a bigger document; the content is supposed to be coded in XML (Formex), but it must not necessarily be valid nor well-formed. xml: The file contains a valid XML (Formex) instance. This is why a container of type 'frag' should always have this file extension. tif: the file contains an image in TIFF format.
volume	indication of the volume of a publication, in most cases this value is 01
year	year of the publication of the <i>Official Journal</i>

Examples:

L_2002309EN.01000101.xml	English version of instance of the document starting on page 1 of volume 1, sequence position 1, in <i>Official Journal</i> series L, no subseries, number 309 of the year 2002
L_2002309EN.01000101.doc.xml	English version of the description of the composition of the document starting on page 1 of volume 1, sequence position 1, in <i>Official Journal</i> series L, no subseries, number 309 of the year 2002
L_2002309EN.toc.xml	description of the publication of an <i>Official Journal</i> , English version, number 309 of 2002, series L
L_2002309EN.xml	table of contents accompanying the PDF package (SUMMARY.PDF instance)
L_2002309EN.xml.tgz	compressed archive of the delivery of the Formex version of an OJ

General rules for ECR instances

These definitions may only be used in the context of the production of European Court Reports.

[17] file.ECR	::=	"ECR" court year lg part subpart? "." fascicle ((start.page page.sequence)? ("case" "notice"))? ("xml" ".tif")
[18] court	::=	"CJ" "T1" "F1" "F2"
[19] year	::=	d{4}
[20] lg	::=	"BG" "CS" "DA" "DE" "EL" "EN" "ES" "ET" "FI" "FR" "GA" "HR" "HU" "IS" "IT" "LT" "LV" "MT" "NL" "PL" "PT" "RO" "SK" "SL" "SV" "XM"
[21] part	::=	"A" "B" "C"

[22]	subpart (only for CST reports)	::=	"1" "2"
[23]	fascicle	::=	d{2}
[24]	start.page	::=	([aprs]d{5}) d{6}
[25]	page.sequence	::=	d{2}

Examples

ECRCJ2005FRA.01.xml	description of a fascicle
ECRCJ2005FRA.0100043901.case.xml	description of a case
ECRCJ2005FRA.0100044101.xml	contents

The schema file

The file containing the XML schema has a special filename. It is composed as follows:

[27]	file.Schema	::=	'formex-' release '-' date '.xd'
[28]	release	::=	d{2} "." d{2} "cj"
[29]	date	::=	d{8}
[30]	d	::=	'0' '1' '2' '3' '4' '5' '6' '7' '8' '9'

The schema file which currently is in force can be found under the following address:

— <http://formex.publications.europa.eu/>

Example

formex-01.00-20040501.xd	Schema file release 01.00, entering into force May 1, 2004
--------------------------	--

The PDF files

All the PDF filenames should follow the definition below:

[31]	file.PDF	::=	series subseries OJno date language (startpage endpage)? quality? '.pdf'
[32]	date	::=	year month day
[33]	month	::=	d{2}
[34]	day	::=	d{2}
[35]	startpage	::=	(d{4}) ([cser]d{3})
[36]	endpage	::=	(d{4}) ([cser]d{3})
[36]	quality	::=	'.x'

PDF filenames must be in lower-case.

The table of contents should have as start and end page the number '0000'. The archive should contain also the table of contents of the delivered Official Journal in XML format (should be named following the example below).

Vocabulary

date	The date of the publication of the OJ.
endpage	Number of the last page in the document.
startpage	Number of the first page in the document.
quality	Indication of the PDF quality: 'x' refers to PDF/X, absence of quality (default value) refers to PDF/A.

Examples

1_30920020503en00000000.pdf	PDF document (table of contents)
1_30920020503en00010013.pdf	PDF document (pages 1-13)
1_30920020503en00140029.pdf	PDF document (pages 14-29)
1_30920020503en.xml	XML document (Table of Contents)

General rules for Consolidation

Formex files delivered in the context of consolidation (contents: clfilename, archive: clarchive) have to be named as follows:

[39] file.CL	::=	series year celexcode lg prodseq "." incseq "." (container ".")? type
[40] clarchive	::=	series year celexcode lg prodseq "." contenttype "." intermediate? archivetype
[41] series	::=	"CL"
[42] year	::=	d{4}
[43] celexcode	::=	c{4}
[44] lg	::=	"BG" "CS" "DA" "DE" "EL" "EN" "ES" "ET" "FI" "FR" "GA" "HR" "HU" 'IS' "IT" "LT" "LV" "MT" "NL" "PL" "PT" "RO" "SK" "SL" "SV" "XM"
[45] prodseq	::=	d{7}
[46] incseq	::=	d{4}
[47] container	::=	"doc" "sls"
[48] type	::=	"xml" "tif" "pdf"
[49] contenttype	::=	"xml" "pdf"
[50] intermediate	::=	"int."
[51] archivetype	::=	"zip" "tgz"
[49] c	::=	'A' 'B' 'C' 'D' 'E' 'F' 'G' 'H' 'I' 'J' 'K' 'L' 'M' 'N' 'O' 'P' 'Q' 'R' 'S' 'T' 'U' 'V' 'W' 'X' 'Y' 'Z'
[50] d	::=	'0' '1' '2' '3' '4' '5' '6' '7' '8' '9'

Vocabulary

archivetype	type of compression method
-------------	----------------------------

c	symbolic placeholder for a character
celexcode	CELEX code (5 positions, capital letter followed by 4 digits)
container	flag for contents of instance: document description or consolidation description
contenttype	type of format in archive, XML or PDF
d	symbolic placeholder for digits
incseq	incremental sequence number starting with 0001, incremented by 1
intermediate	flag for intermediate, not definitive delivery
lg	symbolic placeholder for the language of the document or archive
prodseq	production sequence number as defined by the attribute PROD.SEQ of the INFO.CONSLEG element
series	fixed value: CL
type	file format
year	year of the basic document of the consolidated family

Examples

CL1953D0030FR0040010.xml.zip	archive with XML content
CL1953D0030FR0040010.xml.int.zip	intermediate delivery of an archive with XML content
CL1953D0030FR0040010.0001.doc.xml	document description
CL1953D0030FR0040010.0001.xml	consolidated XML document
CL1953D0030FR0040010.0001.sls.xml	consolidation history description

General rules for secondary legislation

The naming of the documents which are translations of documents published in the OJ will follow the existing rules. For the documents that are specific to the special edition, the following convention should be adopted:

[51] file.Sec.Leg	::=	'DD' year '_' chapter.se volume.se language '.' (volume page sequence '.')? (container '.')? type
[52] year	::=	d{4}
[53] chapter.se	::=	d{2}
[54] volume.se	::=	d{3}
[55] language	::=	'BG' 'CS' 'DA' 'DE' 'EL' 'EN' 'ES' 'ET' 'FI' 'FR' 'GA' 'HR' 'HU' 'IS' 'IT' 'LT' 'LV' 'MK' 'MT' 'NL' 'PL' 'PT' 'RO' 'SK' 'SL' 'SV' 'TR'
[56] page	::=	d{4} ('C' 'E' 'S') d{3}

[57] sequence	::= d{2}
[58] container	::= 'doc' 'frag' 'toc'
[59] type	::= 'frg' 'xml' 'tif' 'tgz' 'zip'
[60] d	::= '0' '1' '2' '3' '4' '5' '6' '7' '8' '9'

Vocabulary

chapter.se	chapter number of the special edition
container	indicator for instance describing the composition of a document or a publication: no container: XML instance, document component doc: description of a document frag: encapsulation of fragments toc: table of contents of a volume (not a table of contents within a document!)
d	symbolic placeholder for digits
language	language of the document or the publication (a list of valid values is available within the schema)
page	starting page of the document; in some cases the number is preceded by a letter, which indicates that the numbering does not follow the normal pagination; the letter 'S' indicates supplement pages which are used for the cover pages of a publication or for inserted forms in the case of competitions, 'E' indicates any other inserted object, 'C' precedes the number of the cover pages of a consolidated document; in any case the length of the pagination never exceeds 4 characters
sequence	sequence of document on the starting page
type	indication of the contents format: frg: The file contains fragments of a bigger document; the content is supposed to be coded in XML (Formex), but it must not necessarily be valid nor well-formed xml: The file contains a valid XML (Formex) instance. This is why a container of type 'frag' should always have this file extension xsl: The file contains a layout description in form of a stylesheet in XSL tif: the file contains an image in TIFF format.
volume.se	volume number of the special edition
year	year of the publication of the Official Journal

Examples:

DD2004_02001CS.000101.xml	Czech version of instance of the first document starting on page 1, in Special Edition chapter 2 volume 1 of the year 2004
DD2004_02001CS.000101.doc.xml	Czech version of the description of the composition of the first document starting on page 1, in Special Edition chapter 2 volume 1 of the year 2004
L_1975100CS.01000101.xml	Czech version of instance of the document that corresponds to the translation of one published in OJL, year 1975, number 100, volume 1, page 1, sequence 1
L_1975100CS.01000101.doc.xml	Czech version of the description of the composition of the document that corresponds to the translation of one published in OJL, year 1975, number 100, volume 1, page 1, sequence 1
DD2004_02001CS.toc.xml	description of the publication of a Special Edition, Czech version, chapter 2 volume 1 of the year 2004
DD2004_02001CS.xml	table of contents accompanying the PDF package (SUMMARY.PDF instance)
DD2004_02001CS.xml.tgz	compressed archive of the delivery of the Formex version of a special edition
DD2004_02001CS.xml	instance accompanying the PDF delivery for the Special Edition, Czech version, chapter 2 volume 1 of the year 2004

Fragmentation

1. Explanations

Large documents may be divided into fragments which are referenced from within the main document or sub-document instance (also see the element "INCL.ELEMENT"). A fragment can contain any portion of the document which must perfectly suit into the superior instance when the content of the fragment just replaces the reference. A merge process will validate the correct use.

As a fragment can contain different elements on the entry level or root level, it is neither always a valid nor a well-formed document. In order to maintain the possibility to validate a fragment (i.e. a file with the extension ".frg"), it has to be accompanied by a file with the same name, but with the suffix ".frag.xml" instead. This instance supplies a single root element (always FRAGMENT) which only contains an entity reference to the contents of the fragment (= file ".frg"). The entity with the unique name "frag" is defined in the subset of the document type statement in the ".frag.xml" instance.

N.B.: The delivery of the ".frag.xml" instance is mandatory for each fragment (".frg").

2. Example

```
<?xml version="1.0" encoding="UTF-8"?>
<!DOCTYPE FRAGMENT [
  <!ENTITY frag SYSTEM "CA2002104EN.01000601.frg">
]>
<FRAGMENT xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="Formex4-01.01.20040501.xd">
  &frag;
</FRAGMENT>
```

Exchange of data (1)

Introduction

This document will describe the exchange of Formex data between the producer of the data and the *Office for Official Publications of the European Communities*.

Exchange mode

The exchange of data between the contractor and the Publications Office (or its representative) is normally executed by using the network. The contractor has to take into account all costs which he considers necessary, while the Publications Office offers the entry point. From a technical point of view, the Publications Office uses a native TCP/IP network which is connected to the public networks by means of ISDN. The transfer protocol for files is FTP (*File Transfer Protocol*), the transfer mode is binary.

If the contractor chooses the network for the transfer of files, a confirmation message can be sent by the Publications Office. These messages will normally be transmitted by e-mail, but other ways are possible as well.

The initiator of the exchange has to ask the Publications Office, Control and Security Section (INFRA/CS), for an adequate access authorisation. He also has to inform about the network address which will be used as well as about the users who will be implied in these procedures (address, telephone number, telefax, e-mail, etc.).

The *Publications Office* uses a firewall system to protect its installations. If the contractor considers it necessary and useful, he may install a similar protection procedure on his own costs. The Publications Office will not be responsible for any attack via IT installations that might be registered.

If the request for access authorisation sent by the contractor is accepted, he will receive, by confidential mail, a user account, a password and the name of the directory where the files have to be transferred to.

Transmission

The contractor transfers the data concerning the language version of each *Official Journal* issue in a single transmission. The name of the transmission is constructed as follows:

SAYYYYNNNLL.OJS.ext

S	::=	series of the <i>Official Journal</i> : C or L
A	::=	extension of the series of the <i>Official Journal</i> : A for annexed issue, E for electronic issue (OJ CE only), _ (underscore) for normal issues.
YYYY	::=	the year of the publication
NNN	::=	current number of the <i>Official Journal</i> , always three digits
LL	::=	language version: one of the following codes has to be used: CS DA DE EL EN ES ET FI FR GA HU IT LT LV MT NL PL PT SK SL SV
OJS	::=	composition of the string OJ and the contents of the S field
ext	::=	extension according to mode used for the creation: <i>zip</i> or <i>tar.gz</i> .

Structure of transmission

The transmission consists of only one complete language version of an *Official Journal* issue. The archive has to respect the following tree structure:

./SAYYYYNNN/LL/

For the single components see above.

Format for exchange on CDROM

The standard for the exchange on CDROM is based on ISO 9660, level 2, with a maximum length of filenames up to 31 characters.

The production of the CDROM has to respect the following extensions to the standard ISO 9660 in dependence on the platform for the generation:

1. the option 'Rock Ridge' for UNIX based systems (long file names, conservation of permissions, ...)
 2. the option 'Joliet' for Windows™ based systems (long file names, depth of directories, ...).
-
- (1) The specifications for the exchange of data may be modified according to the production environment of the *Publications Office*. In cooperation with its partners the Publications Office may adapt the procedure to technological evolution.

The image formats

Preliminary remarks

This part of the physical specifications clarifies the use of TIFF as format for images which are included in Formex instances (INCL.ELEMENT).

The specifications are based on the international standard TIFF (*Tagged Image File Format*), version 6.0, described in the document

The TIFF standard

The TIFF 6.0 specifications are composed of two parts. The first one describes the kernel of the standard. It has to be fulfilled by any tool which is said to be TIFF compatible. The second part contains extensions which have been added for special purposes. Therefore they may not be available in all tools.

The kernel describes four image types:

- bilevel encoding, black and white: the two formats TIF_G3 and TIF_G4 only allow the encoding of black and white images;
- encoding of different grey scales (16 or 256 levels);
- encoding of colours with a palette included in the TIFF file itself; in that case the pixels reference the entries of the palette;
- encoding of colours according to the RGB methodology (*Red - Green - Blue*).

All tools which are compliant to TIFF 6.0 have to handle these four formats.

The specifications of compression algorithms within the kernel of the standard are limited. For images in black and white, two methods are allowed: TIF_G3 and PackBits. The other formats only support the method PackBits.

The format TIF_G4 was introduced as recommendation by CCITT for the encoding of fax transmissions. Its only interest consists in the higher rates of compression. As this format is not part of the kernel, it is not supported by all tools on the market.

Images within Formex deliveries

Within the Formex deliveries the Publications Office only accepts TIFF images which can be displayed by Quick View and Imaging and be inserted into Word 97 documents.

For these reasons, only the following formats will be accepted by the Publications Office:

- black and white images with TIF_G3 or PackBits compression; the photometric interpretation has to be set to 'min-is-white' (in general, this is the default value of this tag);
- images with different grey scales, without any compression;
- images with RGB colour encoding, without any compression.

The resolution has to be set to 400 dpi.

For compatibility and legal reasons, all extensions of the standard are forbidden.

Control of the image formats

The TIFF images have to be controlled by means of the library LIB TIFF V3.4 which is available from the Internet site

<http://www.libtiff.org/>.

The images have to be recognized by the tool TIFFINFO. They have to follow one of the above-mentioned formats as specified by the kernel.

DOI (Digital Object Identifier)

Introduction

- a DOI for each number within the OJ series and for each linguistic version, the DOI suffix is based either on logical references to the publication or on the catalogue number; it is not excluded to have two identifiers according to the dissemination context;
- a DOI for an identified document the title of which appears in the table of contents for each linguistic version.

The DOI suffix has to be based on information which is available at the moment of publication and which is not dependent from any kind of deep analysis.

Formalised DOI-OJ Grammar

```
doi_doc          ::=      prefix "/" suffix_doc
doi_oj           ::=      prefix "/" suffix_oj
a                ::=      "A" | "B" | "C" | "D" | "E" | "F" | "G" | "H" |
                          "I" | "J" | "K" |
                          "L" | "M" | "N" | "O" | "P" | "Q" | "R" | "S" |
                          "T" | "U" | "V" |
                          "W" | "X" | "Y" | "Z"
d                ::=      "0" | "1" | "2" | "3" | "4" | "5" | "6" | "7" |
                          "8" | "9"
issn             ::=      d{4} "-" d{3} (d | "X")
lang.ver         ::=      «ISO 639-2»
log.id           ::=      series sub-series year "." num.cur
log.id.ext       ::=      log.id "." tome page sequence
num.cur          ::=      d{3}
page            ::=      (d | "s" | "e" | "c") d{3}
prefix           ::=      "10.3000" | "10.3001"
sequence         ::=      d{2}
series           ::=      "C" | "L"
sub-series       ::=      "_" | "A" | "E" | "G" | "M"
suffix_doc       ::=      log.id.ext "." lang.ver
suffix_oj        ::=      issn "." (log.id "." lang.ver)
tome             ::=      d{2}
year            ::=      d{4}
```

Vocabulary

doi_doc	document identifier
doi_oj	identifier for OJ (single number)
a	collection of capital letters allowed in the identifier
d	digit
issn	formatted ISSN
lang.ver	language code according to ISO 639-2
log.id	basic components of logical identifier
log.id.ext	extended logical identifier
num.cur	current number of OJ
page	page number (if necessary with prefix)
prefix	DOI prefix
sequence	sequence of document on page
series	main series of OJ
sub-series	sub-series
suffix_doc	DOI suffix for a document
suffix_oj	DOI suffix for a number of OJ
tome	number of tome
year	publication year

Examples:

doi:10.nnnn/1725- 2563.L_2008.116.fre	OJ L series in FR (logical reference)
doi:10.nnnn/L_2008.116.01000301.fre	Second document in the OJ

Catalog of schema versions

1. Explanations

An XML instance in a file with the unique name "catalog.xml". It only contains a list of the different versions which have been used for the production of the electronic deliveries of Official Journal publications. The root element "catalog" contains one or more elements named "entry". Each element is supplied with up to four attributes.

The attribute "file" contains the filename of the catalog. It is mandatory.

The attribute "version" indicates the version of the Formex schema. It is also mandatory.

The attribute "date" specifies the date when the version entered into force. It is mandatory as well.

The optional attribute "comment" may contain information on the use of the concerned version.

2. Example

```
<?xml version="1.0" encoding="UTF-8"?>
<catalog xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
xsi:noNamespaceSchemaLocation="catalog.xd">
  <entry file="formex4-0.99-20040301.xd" version="0.99" date="20040301" comment="for
test reasons only"/>
</catalog>
```

Physical specifications - Differences

Preliminary remark

The compiled differences only concern the physical specifications.

Release 0.98

- correction of filename conventions

Release 0.99

- name for schema file (filenames) [not yet applied for this release];
news section;
catalog of schema versions;
manual for use of fragmentation;
precision on rules for the use of elements DATE, TITLE, PRINTER.

Release 1.00

- clarifications on processing instructions
- format for data exchange on CDROM

Release 1.01

- suppression of presentation instructions

Release 1.02 and 2.00

- integration of several characters in order to become compatible with EUAlbertina
redefinition of character ranges
suppression of data exchange via magnetic tapes
text entities allowed in the context of fragment handling
filename convention for special editions in Maltese

Release 3.00

- correction of some errors in the documentation; clarification of ellipsis
- numbering of notes continued over several documents: NNC attribute added to "root" elements
- IN.SUMMARY attribute added to ITEM.REF
- specific element (SE) for secondary legislation
- values BG/RO added to CRIT language attribute
- optional attribute ITEM.ID added to ITEM element (only for internal use, see Manual)
- TOC, ANNOTATION, and GR.ANNOTATION added to CONS.DOC and CONS.DOC.GEN
- suppression of element INCLUSIONS from BIB.INSTANCE.CONNS
- attribute values ROMAN/roman added to NOTE numbering scheme
- elements NOTE, QUOT.END, QUOT.START added to t_btx.form
- modification of IDENTIFIER attribute for ARTICLE and PARAG elements
- clarification of use of HT element on complete paragraphs
- Bulgarian and Romanian quotation marks added to physical specifications
- Update of table of characters for Basque, Catalan and Galician

Release 4.0

- addition of special elements which are only in the context of the Recueil of the Court of Justice; these elements do not concern the production of the Official Journal;
- revision of the type t_sectiontype to fit with the new structure of the OJ L and C;
- revision of the element SECTION.SUMMARY.

Release 4.cl

- addition of filename convention for European Court Reports;
- addition of 70 types and elements for the instances produced as European Court Reports.

Release 5.00

- addition of new type definitions: t_doi.doc, t_doi.oj, t_doi.pub, t_prod.id, t_fin.id;
- addition of new elements: DOI.OJ, DOI.PUB, PROD.ID, FIN.ID;
- modification of existing elements: ACT, AGR, ANNEX, BIB.DOC, BIB.INSTANCE, BIB.VOLUME, CJT, COMPETITION, CORR, DOC.REF.ECR, GENERAL, GR.SEQ, ITEM.REF, LETTER, DOC.MAIN.PUB;
- modification in the ranges of accepted characters.

Release 5.20

- adaptations due to EU extension: HR, IS.
- adaptations to ECR elements

Release 5.56

- protection of personal rights
-

introduction of element ANONYMOUS, introduction of attribute REPUBLICATION on toc level

Release 5.57 and 5.58

- New release of Vademecum of CJ
- modification of ECR models, modification of element INDEX and LIST

Nota bene

Detailed information on the changes in the schema can also be found in the beginning of the schema itself.
